

# Lattix Collapsible Sign Post System

## EMTEK

The Lattix Sign Support system has been designed to progressively crumple on impact, before shearing away from the footplate. This process of deformation cushions the occupants of the vehicle from the massive deceleration forces that so often result in serious injury.

Lattix is now the safest Advance Direction Sign Support system on the market. From day one, Lattix masts will deliver real savings and eliminate many of the on-going hidden costs associated with steel posts and barriers.

All Lattix masts are full-scale safety tested in conformity with EN12767 and tested for strength in accordance with EN 12899-1.

### KEY FEATURES

- EN 12767 and EN12899-1 approved
- Some systems available ex-stock
- Cost-effective
- Durable
- Recyclable
- Range of anchoring systems to suit local requirements for foundations
- Safe and strong
- Bespoke systems available
