

Timber Barrier System

EMTEK Composite Timber and Steel Safety Barrier

Designed primarily for non-highway applications, our composite timber and steel barrier is made up of a steel rail encased in a timber beam. The design combines the strength of steel with the aesthetics of timber, to produce an attractive, yet high performance barrier system.

KEY FEATURES

- Ideal for locations where aesthetics are paramount
- EN: 1317 Approved
- Visible steel components are galvanised and powder coated.
- Available for tight radii bends
- End terminals available
- Motorcycle protection rail available

PERFORMANCE

Performance Class	Working Width	Type	Post Centres	Impact Severity
N2	W5	Single	2000mm	A
N2	W7	Single	4000mm	A
