

Shannon .01 Bollard

EMTEK Shannon Range

Emtek's Shannon Range is a high quality, premier finish bollard design. Manufactured from the unique ferrocast[®], which is an engineering grade polyurethane, cast over a strong steel core. This makes them virtually inert and the non-ferrous exterior means the bollard body will never rust, making them particularly suited to saline environments. High chip and abrasion resistance makes Ferrocast ideal for heavily trafficked areas and other damage-prone locations.

Ferrocast bollards are supplied with a black, two-part polyurethane gloss coating finish as standard. Other RAL colours are available.

KEY FEATURES

- Superior finish
- Durability
- High abrasion and chip resistance
- Minimal Maintenance
- Flame retardant
- Available Ex-stock

AVAILABLE OPTIONS

- Any standard RAL colour
- Crests & Logos
- Anti-ram
- Reflective Bands
- Ballotini Ring
- Base Plate
- Removable socket
- Locking Sockets
- Eyebolts
- Signs
